Branch: CSE (Spec. in AI & ML)
Year: 2025–2026
Course Code: CSE0001
Date: (Submit Date)

Introduction

This project represents my work as a Student Digital Ambassador, focusing on building a comprehensive **Digital Literacy Portfolio**. The primary objective of this project is to enhance awareness about safe, professional, and effective use of digital platforms among students.

The project includes multiple tasks such as creating infographics, building a digital portfolio, exploring coding platforms, understanding professional communication, and spreading cybercrime awareness. All work has been organized systematically to demonstrate practical digital skills required in today's technology-driven world.

Task 1: Digital Literacy Awareness Infographic

Tool Used: Canva

Description:
An informative infographic was designed covering three key areas:

- What is Digital Literacy?
- Useful Digital Tools
- Safe Internet Practices
- Email Etiquette
- Professional Online Presence

The design provides quick and practical tips such as:

- Using password managers
- Maintaining strong passwords
- Writing professional emails

Learning Outcome:
One thing I found particularly interesting was the flexibility Canva offers in designing layouts. It allowed me to freely arrange elements and experiment with colors and styles. However, I also found it slightly challenging to maintain a clean and balanced design, as adding too many elements could make the infographic look cluttered. This task helped me improve both my creativity and presentation skills.

Task 2: Student Digital Portfolio

For this project, I chose platforms such as GitHub, LinkedIn, and Kaggle to build my digital portfolio. GitHub is used for storing and managing code, allowing me to showcase my projects and understand version control. LinkedIn is a professional networking platform

where I can connect with peers, seniors, and industry professionals. Kaggle is used for practicing data science and machine learning through datasets and competitions.

Over the next four years, I plan to use GitHub to upload all my academic and personal projects, creating a strong portfolio. On LinkedIn, I will regularly update my profile, share achievements, and build professional connections. On Kaggle, I aim to participate in competitions and improve my machine learning skills.

These platforms are essential for academic and career growth, as they help in skill development, networking, and building a professional identity.

---

4. Task 3: Coding & Collaboration Platforms

Platforms Used:

- HackerRank
- Google Workspace

On HackerRank, I completed a beginner-level Python challenge, which helped improve my coding skills and logical thinking. It also gave me confidence in solving programming problems and understanding basic concepts.

For collaboration, I used Google Forms to create a Digital Literacy Awareness Quiz consisting of five questions. The quiz included both multiple-choice and short-answer questions. I also connected it to Google Sheets to analyze responses in real-time.

These tools are highly beneficial for academic purposes. HackerRank helps in preparing for coding interviews and improving problem-solving skills, while Google Workspace allows efficient collaboration in group projects and data collection. This task helped me understand how digital tools can make learning more interactive and efficient.

Task 4: Email Etiquette & Communication

Scenario Analysis:
A poorly written email like:
"Hey, need more time on the lab. Thanks."
can lead to miscommunication and ignored requests.

Correct Approach:
A proper email should include:

- Clear subject line
- Formal greeting
- Proper explanation
- Student details

Example Subject:
Extension Request: Lab Submission – Reg No XXXXX

Learning Outcome:
This issue can be avoided by following proper email etiquette. A well-written email should include a clear subject line, formal greeting, complete details, and a polite request. Providing proper context helps the receiver understand and respond effectively. This task taught me the importance of clear and professional communication in academic life.

Task 5: Cybercrime (Phishing)

During this task, I researched phishing, a common cybercrime where attackers trick users into sharing sensitive information like passwords or bank details through fake emails or websites. I was surprised by how realistic these phishing messages can look, often appearing as trusted sources like banks or companies.

As a result, one habit I will change is being more cautious while clicking links or opening emails. I will always verify the sender and avoid entering personal information on unknown websites. This task helped me understand the importance of awareness and careful online behavior.

Personal Reflection

While researching this topic, what surprised me the most was the rapid increase in cyber threats, especially ransomware attacks targeting the education sector. I learned that even students and academic institutions are not safe, and a single mistake like clicking on a suspicious link can lead to serious data loss. The scale and frequency of these attacks made me realize how important digital awareness is in today's world.

As a result, one habit I will personally change is how I manage and store my data. I will regularly back up my important files on secure storage and avoid relying only on local systems. Additionally, I will be more cautious while opening emails, downloading files, and using online platforms to ensure my digital safety.

Conclusion

This project helped me understand that digital literacy is not just about using technology, but about using it **responsibly, safely, and professionally**.

From building a digital portfolio to learning cybersecurity practices, I have developed essential skills that will help me throughout my academic and professional journey.

The most important takeaway is that our digital presence reflects our identity, and maintaining it requires awareness, discipline, and continuous learning.
